
Us Web Coated Swop V2 Download 33

If you do not want to use soft proofing, you can just go to "Convert to Profile" and select US Web Coated (SWOP). If you are in the US, you can also select US HSL. You will then need to enter the numbers in the top field and then click Next. This can be a little tricky if you're not sure about the order you're entering. Just remember that if you have a color number, you also need the corresponding shade number. Once you have entered the numbers, click Next to continue. This is going to be pretty tedious, so if you can, I would suggest you find a tool that automates this part.
