My question is similar to this one: Moving a SQL Server DB to a different computer ... but in the SQL Server 2008 version. If I have an SQL Server database file in a folder, and I want to move it to another computer, say: C:\Users\User\Documents\Source and C:\Users\User\Documents\Destination How can I use T-SQL commands to move the SQL Server database file from one location to another? A: The accepted answer will work in most cases, but if you have multiple instances on different servers, you will need to use sp_MSforeachdb. In this example you would run the script from the server you want to move it to: DECLARE @dbname sysname, @command nvarchar(max); --Get the list of database names from all of the instances, you can put this in a --loop as well. SELECT @dbname = ' SELECT @command = 'use'+ @dbname + ';' SELECT @command --Now generate the sp_MSforeachdb script for each database, you can put this in a --loop as well. SELECT @dbname SELECT @command = @command + 'SELECT "mv'+ @dbname + '.* TO "' + @dbname + '.' + @dbname + '.mdf"' + char(10) FROM (SELECT DISTINCT db_name() db_name ca3bfb1094
